SCALE FOR PROJECT PYTHON MODULE (/PROJECTS/PYTHON-MODULE-06)

You should evaluate 1 student in this team

★

Git repository

```
git@vogsphere.42heilbronn.de:vogsphere/intra-uuid-c41431a4-8cc8
```

Introduction

- Remain polite, courteous, respectful, and constructive
throughout the evaluation process. The well-being of the community
depends on it.

- Together with the person (or group) being evaluated, identify any issues in the work.
Take the time to discuss and debate the problems you have identified.

- You must consider that there might be differences in how your
peers have understood the project's instructions and the
scope of its functionality. Always keep an open mind and grade
their work as honestly as possible. The pedagogy is valid
only if peer evaluation is conducted seriously.

Guidelines

- Only grade the work that is in the student's or group's
Git repository.

- Double-check that the Git repository belongs to the student
or the group. Ensure that the work is for the relevant project
and also check that the "git clone" command is run in an empty folder.

- Check carefully that no malicious aliases were used to fool you
and make you evaluate something other than the content of the
official repository.

- To avoid any surprises, carefully check that both the evaluating
and the evaluated students have reviewed any scripts that may be used
to facilitate grading.

- If the evaluating student has not completed that particular
project yet, it is mandatory for this student to read the
entire subject document prior to starting the defense.

- Use the flags available on this scale to signal an empty repository,
a non-functioning program, a norm error, cheating, etc. In these cases,
the grading is over and the final grade is 0 (or -42 in the case of
cheating). However, with the exception of cheating, you are
encouraged to continue to discuss your work (even if you have not
finished it) in order to identify any issues that may have caused
this failure and to avoid repeating the same mistakes in the future.

- Remember that for the duration of the defense, no unexpected,
premature, uncontrolled termination of the program is allowed (except
if exceptionally allowed);
otherwise, the final grade is 0. Use the appropriate flag.
You should never have to edit any file other than the configuration file, if one exists.
If you want to edit a file, take the time to discuss the reasons with the
evaluated student and make sure both of you agree with this change.

subject.pdf (https://cdn.intra.42.fr/pdf/pdf/212712/en.subject.pdf)

Preliminaries

Basics

- Only grade the work that is in the learner's Git repository.
- Ensure the Git repository belongs to the learner.
- Check that no malicious aliases are used.
- Verify that the project structure matches the subject requirements and the file tree.

Are all preliminary checks satisfied?

Yes No

Part I - The Alembic

Alembic experiment

Test the Alembic scripts:

- Run: python3 ft_alembic_[0-5].py
- The output of each script should demonstrate the same elements as in the example
- ft_alembic_0 uses "import elements" and calls "elements.create_fire()"
- ft_alembic_1 uses "from elements import create_water" and calls "create_water()"
- ft_alembic_2 uses "import alchemy.elements" and calls "alchemy.elements.create_earth()"
- ft_alembic_3 uses "from alchemy.elements import create_air" and calls "create_air()"
- ft_alembic_4 uses "import alchemy" and calls "alchemy.create_air()". It then tries to access "alchemy.create_earth()", and it should fail (uncaught exception allowed).
- ft_alembic_5 uses "from alchemy import create_air" and calls "create_air()"
- Verify that the alchemy package has an **init**.py file in the alchemy folder, and that it imports "
  ".elements" (alternative solutions exist and are accepted) but not "create_earth". Other eleme
  will be controlled in the upcoming questions.

Yes No

Part II - Distillation

Import Distillation experiment

Test the Distillation experiment:

- Run: python3 ft_distillation_[0-1].py
- Verify that direct access to the potions.py file is used and works in distillation_0, testing the s
  healing potions.
- Verify that the direct use of the alchemy module works in distillation_1, testing the strength p
- Verify that the healing potion is called using the "heal()" alias in distillation_1.
- Verify that the **init**.py file for the alchemy module has been updated to expose the potions.
- Check that potions.py correctly imports elements.py and alchemy/elements.py.
- Confirm that the learner understands the differences between import methods.

Yes No

Part III - The Great Transmutation

Transmutation experiment

Test the Transmutation experiment:

- Run: python3 ft_transmutation_[0-2].py
- Verify access to the transmutation recipe "lead_to_gold" using:
  - the alchemy/transmutation/recipes.py file directly
  - the transmutation module
  - the alchemy module
- Check that the transmutation module has an **init**.py file.
- Check that the **init**.py file for the alchemy module has been updated to expose "lead_to_gold
- Check that the recipes.py file contains at least one absolute import and one relative import.

- Verify that the learner understands when to use each approach.

Yes No

Part IV - Avoid the Explosion

Circular experiment

Test the Circular experiment:

- Run: python3 ft_kaboom_[0-1].py
- Verify that both scripts show a working and a failing import (uncaught exception allowed).
- Check that the alchemy/grimoire module contains the expected files: the light_* and dark_* F
  the **init** file.
- Check that ingredients are defined in the spellbook and not in the validator, and that both file
  others.
- Check that "Earth, Wind & Fire" can record the spell "Fantasy"
- Verify that the circular dependency problem is explained
- Ask the learner which solution was used to avoid circular dependencies.

Yes No

Code Quality

Import Mastery Assessment

Evaluate the overall code quality:

- Is the code written in Python 3.10 or higher?
- Does the code adhere to the flake8 linter standards (no errors)?
- Comprehensive type annotations are used throughout (all functions have parameter and retu
  this using mypy (note that there is an exception for ft_alembic_4.py).
- Docstrings are NOT required for this module.
- Is the overall code organization clean and professional?

Yes No

Ratings

Don’t forget to check the flag corresponding to the defense

Ok Outstanding project
